

WACOM SIGNATURE PADS

SOLUTIONS:

Wacom has established itself as the global leader in the world market for pen tablets and a pioneer in the development of the pen as a computer input device. Electronic signatures offer substantial cost savings, reduced processing times, and POPI compliance. Wacom signature tablets are used in various areas where a digital workflow and a high level of security is important. The tablets are installed in many different scenarios such as: POS, e-Payment, insurance, banking and hotel check-in. Gain increased accuracy, efficiency and security with simple plug-and-play, legally-binding, electronic signature solutions. Using electronic signature pads not only reduces paper use, but the associated costs, like storage, copying, printing, postage, disposal & recycling

FEATURES:

Wacom's signature tablets feature a patented pressure-sensitive, battery-free and cordless pen technology to capture clear, true-to-life signatures. Pens never need batteries or a cord to carry an electronic signal, and since no electronic signals are passed through the pen tether, pen operation cannot be affected by damage to the tether.

- Create secure PDF files from any application (virtual PDF printer)
- Capture signature image and biometric data (pressure & speed)
- Document changes are not possible after signing
- Multiple signatures in one document are possible
- Signed PDF documents are protected by a digital certificate
- Capture signatures electronically and merge them with the PDF document
- Signed PDF is 100% Adobe Acrobat compatible

BENEFITS:

- Digital Signature solutions help lower costs and eliminate inefficiencies associated with traditional paper documentation
- Robust devices
- Plug & Play technology
- Make process workflows more efficient
- Reduction in paper being created and stored
